

STAN

The University of Texas Health Science Center at Houston

THIS IS STAN. HE HAS EBOLA SO YOU DON'T HAVE TO.

On any given day, this fellow is likely to be suffering from blistering boils, bleeding from his ears, even cardiac arrest. But don't worry, he's not contagious – it's his job. As a breathing life-size PVC dummy, Stan is used by doctors at the UT Health Science Center at Houston to train high-level emergency response teams. So if disaster strikes – from hurricanes to biological attacks – Texas is better prepared.

All across Texas, public universities are working to protect and improve your health, safety and quality of life – your tomorrow.
